It happened.

An open weights model just dropped that benchmarks higher than Opus 4.6 is out

If you have 2 Mac Studios w/ 512gb, you can run Opus 4.6 level intelligence completely for free on your desk.

I warned you this would happen months ago. Now Mac Studios and Mac Minis are sold out.

The next Mac Studio has been delayed until Q3/Q4. The price will be significantly higher

I told you this was going to happen. Intelligence explosion. Hardware bottleneck. Increased efficiency

Luckily I picked up 2 Mac Studio 512gb, 2 Mac Minis, and a DGX Spark

I will be loading this up in the next couple of days and will have completely private super intelligence running for me 24/7

I'm telling you right now by end of year we will have a local version of Mythos. It's 100% guaranteed

You called me crazy but every single prediction I've made has turned out to be true

These models will only get more efficient and require less hardware. But that hardware is only going to get more expensive

+ Follow

BREAKING: **Kimi (Moonshot AI)** has launched a god-tier model: GPT 5.4 level coding, 76% cheaper than opus 4.7 and 100% open source / free to use. i mean look at this:

> kimi k2.6 can code continuously for 12 hours straight, run 300+ agents in parallel from a SINGLE prompt.

> 4,000+ tool calls, over 12 hours of continuous execution, with generalization across languages (Rust, Go, Python) and tasks (frontend, devops, perf optimization).

> Videos in hero sections, WebGL shaders, GSAP + Framer Motion, Three.js 3D.

> 300 parallel sub-agents = 4,000 steps per run (up from K2.5's 100 / 1,500). One prompt, 100+ files.

> K2.6 model powers OpenClaw, Hermes Agent, etc for 24/7 autonomous ops.

> bring your own agents. command your friends', bots & humans in the loop.

every 3 months theres a new open model that gets closer to the best claude/GPT models.

A huge increase in AI research

With not equal returns on business value

Efficiency gains are strong, but revenue impact lags

Globally, AI continues to deliver clear improvements in efficiency; however, the financial returns of this technology are being felt much more slowly. While 74% of organisations surveyed hope AI will grow revenue, only 20% can currently demonstrate measurable impact. This gap shows where many initiatives are stalling. Boards are asking what AI drives beyond just efficiency, and which new offerings and service models it can unlock.

A gap. A very big gap.

Our latest completed project:

In the EU, over 58 million tones of **food waste** are generated annually

In 2022, Belgium was the second-largest food waster in the EU

Finding the cause: Food Supply Chains

- According to Eurostat, 47% of the total food waste is related to **supply chain** activities

Farm

Producer

Distributor

Retail

Demand > Inventory

- Urgent orders
- Pressure in workplace
- Potential lost sales

Demand < Inventory

- Food waste

Consumer's behavior is unpredictable!!!

Our Solution: Smart Meal Planning

SMART MEAL PLANNER

Develop an advanced AI Demand Estimation Platform that accurately estimates future demand for ready-to-eat meals

Our Solution: Smart Meal Planning

SMART MEAL PLANNER

Develop an advanced AI Demand Estimation Platform that accurately estimates future demand for ready-to-eat meals

- And can be easily integrated with the practices of multiple industry partners from different fields (School caterers, distributors, hospital bistros) -

Our impact:

Forecasting accuracy

25%↑

Food waste

43%↓

Estimated costs

36%↓

Platform access

The real hurdle was translating research into practice

What this revealed

The real opportunity is a scalable path to adoption

Where we are now

Where we are now

Where we are now

Free tier

- Open-source part of our codebase
- Research valorization
- Market our efficiency

Standard tier

- Access the new structured system
- Full workflow automation

Premium tier

- Deal with the technical hurdles
- Build digital maturity

The takeaway:

1. The models (the research) are out there.

The real problem is adoption.

2. The importance of open source & valorization

Reputation, transparency, trust, improvement
